

MOKIO SKINS

1. Getting started with Mokia

See detailed instructions at www.mokio.org/support

Lets assume that Mokia is mounted under `/backend`

2. Getting started with Mokia Skins

After you set up application with Mokia, you need to add following line to your Gemfile:

```
gem mokio_skins, :git => http://gitlab.goodone.pl/ruby/mokio_skins
```

Then run: `bundle install`

and start your application: `rails s`

3. Creating a skin for your website with Mokia CMS

a. Open Mokia backend: localhost:3000/backend

b. Login with default admin account:

login: admin@admin.com

password: admin

c. Navigate to **Skins** → **Add new skin**

d. Prepare skin packed with zip with the following structure:

```
[ZIP] skin_name
[FOLDER] skin_name
-[FOLDER] templates – main skin templates (currently available
formats: erb, haml, slim)
--default.html.erb
--layout.html.erb
--home.html.erb
--article.html.erb
--pic_gallery.html.erb
--mov_gallery.html.erb
--contact.html.erb
--list.html.erb
-[FOLDER] js (javascripts for your skin)
--file.js
--file2.js
-[FOLDER] css (css stylesheets for your skin)
--style.css
```

```
--style2.css
-[FOLDER] images (pictures, photos, graphics for your skins)
(jpg,gif,png)
--img1.jpg
--img2.png
--img3.gif
```

Requirements for the skin:

- ZIP filename needs to be the same as skin name
- Skin name has to be unique per system
- Supported styles formats: css
- Supported scripts formats: js
- Supported pictures formats: jpg, gif, png

Skin templates are HTML files with pieces of ruby code with various helpers provided by Mokia Skins (see point 6). More information about erb, haml and slim format can be found here:

ERB: <http://www.stuartellis.eu/articles/erb/>

HAML: <http://haml.info/>

SLIM: <http://slim-lang.com/>

4. Activate your skin

To activate your skin, navigate to: **Skins** → **Edit skin**

- a. Change Active field to On (green)
- b. Save the skin

5. Edit skin

To edit your skin, navigate to: **Skins** → **Edit skin**

On the left there is a list of skin files available for edit.

Useful shortcuts:

- **[Ctrl R]** - display hints in editor
- **[Ctrl S]** or Save File – save your changes in given file
- **[Ctrl Z]** - undo changes

Description of helper methods available in Mokia Skins editor can be found on <http://www.mokio.org/support>
